MapOut

About

We love maps — MapOut is an iPhone/iPad app developed in Switzerland by Stefan Frey and Michael Kussmaul. It is the perfect companion on your field trips. For hikers, bikers or anyone passionate about cartography.

MapOut focus on simplicity and to provide the best possible experience, we developed our own map engine to offer a unique visual style. This allows us to combine map data in new ways — like our special 3D "tilt" view to interactively explore the landscape around you or the drawing editor where you can tap together your own tour.

Copyright

MapOut uses map data from openstreetmap.org and if you want to use our screenshots on publications you need to add a copyright notice as required by OpenStreetMap - simply add "Map data © OpenStreetMap" somewhere beside your article and you are fine.
